

# HYPERWAVE

## Modules for Intranet and Private Cloud Solution

Hyperwave optimizes the flow of information in your enterprise.  
The technical basis is provided by high-performance modules, built on the IS/8 server.  
Platform-independent, browser-based and scalable.

1

### Web Content Management

A successful intranet solution depends on being able to create content easily and present it attractively. Website, blog or wiki: Hyperwave WCM provides templates and snippets that allow you to publish content in next to no time, and reduces administrative effort. No previous knowledge required.

2

### eKS Document Management

Effective document management saves time and protects sensitive information. Hyperwave makes sure everyone's working on the most recent version of a file. Independent of time and place.

3

### Workflow

Optimum connections improve the flow of information. Hyperwave Workflow connects documents with business processes and with all the people working on them. Steer your processes centrally from the Hyperwave Dashboard. Completely effective control and distribution. All from within your browser.

4

### Team Workspace

Businesses are more successful, the more smoothly people can work together. Hyperwave Team Workspace is the intuitive solution for web-based team work. Collaboration, planning and archiving e-mails are all optimized. For internal and external project groups.
